-!- SIMILARITY: Belongs to the phytochrome family.
-!- SIMILARITY: Contains 1 histidine kinase domain.
-!- SIMILARITY: Contains 2 PAS (PER-ARNT-SIM) dimerization domain

Human soft tissue sarcoma-upregulated protein - SEQ ID 1764

soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human.

Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

Example 2; SEQ ID NO 1764; 210pp; English.

DE AZIZ N, Ginsburg WM, Zlotn The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                       This invention describes a novel polypeptide sharing one or more homologous amino acid domains with the legiss (1gs) protein, a downstream component of the Wnt/Wingless (Wnt/Wg) signaling pathway involved in the formation and maintenance of spatial arrangements and proliferation of tissues during development, and in the formation and growth of many human tumours. The products of the invention have cytostatic activity and can be used to treat cellular disorders, blood disorders and cancers caused by over-stimulation of the Wnt pathway, where the cancerous condition is colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer. The product could also be used to promote tissue regeneration and repair. This sequence represents the human legless (1gs) protein homologue lgs/bcl9 described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Legless; human; lgs; Wnt/Wingless signaling pathway; Wnt; Wg; tissue proliferation; tumour; cytostatic; cellular disorder; colon; blood disorder; cancer; breast, head and neck cancer; brain; thyroid; medulloblastoma; skin cancer; tissue regeneration; tissue repair.

                                                                                                                                                                                                                                                 cc encoding such proteins. Lgs sequences are useful for the treatment of cc disorders of cell fate such as differentiation or proliferation. The cc invention is used to treat blood disease or a cancerous condition cc characterised by over-stimulation of the Wnt pathway such as colon, cc breast, head and neck, brain, thyroid, medulloblastoma or skin cancer and cc is administered to prevent progression from a pre-neoplastic or non-cc malignant condition to a neoplastic or malignant state. It is cadministered to promote tissue regeneration and repair. The invention is cc also useful in the therapy of diseases cost by an over-activation of Wg pathway. It is useful for reducing lgs gene expression in an invertebrate cc or vertebrate organism or an invertebrate or vertebrate cell line. The cc lgs/bcl9 protein used in the invention

                                                                                                                                                                                                                                                                                                                            altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug soreening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELRS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiarthritic, osteopathic, ophthalmological and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            myoclonic epilepsy ragged red fibre syndrome; MERRF; cancer; neuroprotective; nootropic; antidiabetic; anticonvulsant; antiarthritic; osteopathic; ophthalmological; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12-APR-2002; 2002US-0372843P

                                                                                                                                                                                                      cc amino acid domains with a Legless (Lgs) protein and is therefore a contract and homologue of Lgs. The invention also relates to a nucleotide sequence encoding a protein present in invertebrate and/or vertebrate cc organisms, the nucleotide sequence encoding a protein comprising a corpositive function in a regulatory pathway and the use of the polypeptide for the isolation of Lgs-binding proteins by carrying out an assay chosen cc from an in vitro binding assay with such a peptide or a co-cimmunoprecipitation from vertebrate or invertebrate cell lysates or a comammalian or yeast two hybrid assay. The polypeptide and polynucleotide are useful for treating disorders of cell fate, which involves administering therapeutic compounds chosen from invertebrate and cyrrebrate Lgs protein homologues or fragments, antibodies, antibody crarebrate Jgs antisense DNA, lgs antisense RNA, lgs double-stranded RNA, care related to cell differentiation or cell proliferation. The disorders are related to cell differentiation or cell proliferation. The disorders are related to cell differentiation or cell proliferation. The disorders are related to treat a cancerous condition by preventing progression from a pre-neoplastic or non-malignant condition to a neoplastic or stimulation of the Wnt pathway and is medulloblastoma or cancer of the compound may also be administered to a blood disease to promote tissue colon, breast, head and neck, brain, thyroid or skin. The therapeutic colon, when the compound condition are represented to tissue tregeneration and repair. This sequence represents the human Lgs/Bc19

thrombolytic activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby
                                                                                                                                                                                                                                                                                                                                 giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity; hammanopoiesis regulatory activity; tissue growth activity; immunomodulatory activity; activity. or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or chemokinetic activities; haemostatic, thrombotic or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           haematopoiesis regulation; tissue growth; immunomodulator; activin; inhibin; chemotaxis; chemokinesis; thrombolysis; oncogenesis; proliferation; metastasis; cancer; tumour; haematopoietic disorder; myeloid cell disorder; lymphoid cell disorder; asthma; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cell culture; drug screening; gene therapy; antiinflammatory; antiasthmatic; antiarthritic; haemostatic; antiarteriosclerotic; cytostatic; ostcopathic; vasotropic; cardiant; virucide; antibacterial;

organisms, the nucleotide sequence encoding a protein comprising a positive function in a regulatory pathway and the use of the polypeptide for the isolation of Igs-bindary proteins by carrying out an assay chosen from an in vitro binding assay with such a peptide or a communoprecipitation from vertebrate or invertebrate cell lysates or a mammalian or yeast two hybrid assay. The polypeptide and polynucleotide are useful for treating disorders of cell fate, which involves administering therapeutic compounds chosen from invertebrate and vertebrate Igs protein homologues or fragments, antibodies, antibody fragments, 1gs antisense NNA, 1gs double-stranded NNA, 1gs antisense NNA, 1gs antisense NNA, 1gs double-stranded NNA, 1gs double-st
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                           amino acid domains with a Legless (Lgs) protein and is therefore a functional homologue of Lgs. The invention also relates to a nucleotide seguence encoding a protein present in invertebrate and/or vertebrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-JUL-2000; 2000US-0221502P

The disorders are related to cell differentiation or cell proliferation. The compound is administered to treat a cancerous condition by preventing progression from a pre-neoplastic or non-malignant condition to a neoplastic or malignant state. The cancerous condition is characterised by overstimulation of the Wnt pathway and is medulloblastoma or cancer of the colon, breast, head and neck, brain, thyroid or skin. The therapeutic compound may also be administered to a blood disease to promote tissue regeneration and repair. This sequence represents a human Lgs/Bc19 peptide fragment of the invention.
                                                                                                                                                                                                                                                            The invention relates to a beta-catenin nuclear localised protein and DNA encoding the protein. The protein and encoding DNA are applicable in diagnosis and treatment of diseases associated with nuclear localisation of beta-catenin e.g. cancer, including gene therapy. The present sequence represents the amino acid sequence of mouse beta-catenin nuclear localised protein #2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 35

                                                                                                                            The invention relates to a beta-catenin nuclear localised protein and DNA encoding the protein. The protein and encoding DNA are applicable in diagnosis and treatment of diseases associated with nuclear localisation of beta-catenin e.g. cancer, including gene therapy. The present sequence represents the amino acid sequence of mouse beta-catenin nuclear
                                                                                                                                                                                                                                                                                                                                                                                                                                WO200224738-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        encoding the protein. The protein and encoding DNA are applicable in diagnosis and treatment of diseases associated with nuclear localisation of beta-catenin e.g. cancer, including gene therapy. The present sequence represents the amino acid sequence of human beta-catenin nuclear localised protein #2

```

The invention relates to novel legless (lgs) proteins and polynucleotides encoding such proteins. Lgs sequences are useful for the treatment of disorders of cell fate such as differentiation or proliferation. The invention is used to treat blood disease or a cancerous condition characterised by over-stimulation of the Wnt pathway such as colon,

over-stimulation of neck, brain, thyroi

thyroid,

ne Wnt pathway such medulloblastoma or

as colon, skin canc

and

The invention relates to a polypeptide sharing one or more homologous amino acid domains with a Legless (Lgs) protein and is therefore a functional homologue of Lgs. The invention also relates to a nucleotide sequence encoding a protein present in invertebrate and/or vertebrate organisms, the nucleotide sequence encoding a protein comprising a positive function in a regulatory pathway and the use of the polypeptide for the isolation of Lgs-binding proteins by carrying out an assay chosen from an in vitro binding assay with such a peptide or a communoprecipitation from vertebrate or invertebrate cell lysates or a mammalian or yeast two hybrid assay. The polypeptide and polynucleotide are useful for treating disorders of cell fate, which involves administering therapeutic compounds chosen from invertebrate and vertebrate Lgs protein homologues or fragments, antibodies, antibodies, antibodies, antibodies, antibodies, antibodies consenses RNA, lgs antisense RNA, lgs antisense RNA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        is administered to prevent progression from a pre-neoplastic or non-malignant condition to a neoplastic or malignant state. It is administered to promote tissue regeneration and repair. The invention is also useful in the therapy of diseases cost by an over-activation of Wg pathway. It is useful for reducing 1gs gene expression in an invertebrate or vertebrate organism or an invertebrate or vertebrate organism or an invertebrate or vertebrate cell line. The invention is also useful in gene therapy. The present sequence is human 1gs-1 protein used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polypeptide sharing one or more homologue amino acid domains
Legless protein being functional homologue of Legless, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
              The invention relates to novel legless (1gs) proteins and polynucleotides encoding such proteins. Lgs sequences are useful for the treatment of disorders of cell fate such as differentiation or proliferation. The invention is used to treat blood disease or a cancerous condition characterised by over-stimulation of the Wnt pathway such as colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer and is administered to prevent progression from a pre-neoplastic or non-malignant condition to a neoplastic or malignant state. It is administered to promote tissue regeneration and repair. The invention is also useful in the therapy of diseases cost by an over-activation of Wg pathway. It is useful for reducing 1gs gene expression in an invertebrate or vertebrate organism or an invertebrate or vertebrate cell line. The invention is also useful in gene therapy. The present sequence is Drosophila species legless (1gs) peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            interfering with Lgs function, synthesis and degradation. The disorders are related to cell differentiation or cell proliferation. The compound is administered to treat a cancerous condition by preventing progression from a pre-neoplastic or non-malignant condition to a neoplastic or malignant state. The cancerous condition is characterised by overstimulation of the Wnt pathway and is medulloblastoma or cancer of the colon, breast, head and neck, brain, thyroid or skin. The therapeutic compound may also be administered to a blood disease to promote tissue regeneration and repair. This sequence represents a human Lgs/Bc19 partial polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15-JAN-2004

CC amino acid domains with a Legless (Lgs) protein and is therefore a CC functional homologue of Lgs. The invention also relates to a nucleotide sequence encoding a protein present in invertebrate and/or vertebrate CC organisms, the nucleotide sequence encoding a protein present in invertebrate and/or vertebrate CC organisms, the nucleotide sequence encoding a protein comprising a CC positive function in a regulatory pathway and the use of the polypeptide CC for the isolation of Lgs-binding proteins by carrying out an assay chosen CC immunoprecipitation from vertebrate or invertebrate cell lysates or a CC mammalian or yeast two hybrid assay. The polypeptide and polynucleotide are useful for treating disorders of cell fate, which involves CC are useful for treating disorders of cell fate, which involves CC ragments, lgs antisense NNA, lgs antisense RNA, lgs double-stranded RNA, conterfering with Lgs function, synthesis and degradation. The disorders is administered to treat a cancerous condition by preventing progression CC malignant state. The cancerous condition is characterised by overcc stimulation of the Wnt pathway and is medulloblastoma or cancer of the CC compound may also be administered to brain, thyroid or skin. The therapeutic compound may also be administered to a concer of the CC compound may also be administered to a concer of the CC compound may also be administered to a concer of the CC compound may also be administered to a concer of the concernes of the concer

                                                                                                                                                                                               capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL016176) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   where the cancerous condition is colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer. The product could also be used to promote tissue regeneration and repair. This sequence represents the Drosophila melanogaster (fruitfly) legless (lgs) protein described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        downstream component of the Wnt/Wingless (Wnt/Wg) signaling pathway involved in the formation and maintenance of spatial arrangements and proliferation of tissues during development, and in the formation and growth of many human tumours. The products of the invention have cytostatic activity and can be used to treat cellular disorders, blood disorders and cancers caused by over-stimulation of the Wnt pathway,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel polypeptide sharing one or more homologous amino acid domains with the legless (lgs) protein, a downstream component of the Wnt/Wingless (Wnt/Wg) signaling path
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Legless; fruitfly; 1gs; Wnt/Wingless signaling pathway; Wnt; Wg; tissue proliferation; tumour; cytostatic; cellular disorder; colon; blood disorder; cancer; breast; head and neck cancer; brain; thyroid; medulloblastoma; skin cancer; tissue regeneration; tissue repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1464 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         04-JUL-2002.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US2002086986-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    also useful in the therapy of diseases cost by an over-activation of Wg pathway. It is useful for reducing 1gs gene expression in an invertebrate or vertebrate organism or an invertebrate or vertebrate cell line. The invention is also useful in gene therapy. The present sequence is Drosophila species legless (1gs) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel legless (19s) proteins and polynucleotides encoding such proteins. Lgs sequences are useful for the treatment of disorders of cell fate such as differentiation or proliferation. The invention is used to treat blood disease or a cancerous condition characterised by over-stimulation of the Wht pathway such as colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer and is administered to prevent progression from a pre-neoplastic or nonmalignant condition to a neoplastic or malignant state. It is administered to promote tissue regeneration and repair. The invention is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC functional homologue of Egs. The invention also relates to a nucleotide corganisms, the nucleotide sequence encoding a protein present in invertebrate and/or vertebrate cC organisms, the nucleotide sequence encoding a protein comprising a CC positive function in a regulatory pathway and the use of the polypeptide cordinative function in a regulatory pathway and the use of the polypeptide cC for the isolation of Lgs-binding proteins by carrying out an assay chosen cC immunoprecipitation from vertebrate or invertebrate cell lysates or a cC mammalian or yeast two hybrid assay. The polypeptide and polynucleotide care useful for treating disorders of cell fate, which involves cC administering therapeutic compounds chosen from invertebrate antibody createbrate Lgs protein homologues or fragments, antibodies, antibody cf fragments, lgs antisense DNA, lgs antisense RNA, lgs double-stranded RNA, cs mall peptides or chemical and natural compounds being capable of contentering with Lgs function, synthesis and degradation. The disorders care related to cell differentiation or cell proliferation. The compound content state. The cancerous condition by preventing progression from a pre-neoplastic or non-malignant condition to a neoplastic or malignant state. The cancerous condition is characterised by over-colon, breast, head and neck, brain, thyroid or skin. The therapeutic compound may also be administered to a blood disease to promote tissue regeneration and repair. This sequence represents the Drosophila Lgs colypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         disease detection and treatment" (MDDT) and genes encoding them. The invention also includes molecule which are at least 90% identical to the protein and nucleotide sequences. This sequence represents a protein of the invention. Disorders associated with aberrant expression of MDDT, a cell proliferative disorders (e.g. cancer or atherosclerosis), autoimmune/inflammatory disorders (e.g. AIDS, allergies, diabetes, glomerulomephritis or autoimmune thyroiditis), developmental disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tang YT, Forsythe IJ, Emerling BM, Hafalia AJA, Yue H, Xu Gietzen KJ, Chawla NK, Baughn MR, Marquis JP, Becha SD, Ka Lal PG, Richardson TW, Lee SY, Lee EA, Tran B, Warren BA, Gururajan R, Sprague WW, Blake JJ, Thangavelu K, Swarmakar Gorvad AE, Griffin JA, Lindquist EA, Elliott VS, Ison CH;

                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC organism such as A. fumigatus, to treat a non-infectious disease in a CC subject (e.g. cancer), to prevent or inhibit formation on a surface of a by A. fumigatus, or to prevent or inhibit formation on a surface of a CC biofilm comprising A. fumigatus. The polynucleotides are useful for CC therapeutic use, as markers for host tissues in which the pathogenic CC organisms invade or reside, for comparing with the DNA sequence of A. CC fumigatus to identify duplicated genes or paralogues having the same or CC similar biochemical activity and/or function, for comparing with DNA CC sequences of other related or distant pathogenic organisms to identify sequences of other related or distant pathogenic organisms to identify contained or thologous essential or virulence genes, for selecting and CC making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anti-protein antibodies, as an CC antigen to raise anti-DNA antibodies or to elicit another immune CC response, and for identifying polynucleotides encoding the other protein which binding occurs or to identify inhibitors of the binding CC interaction. The polypeptides may be used to raise antibodies or to elicit immune levels of the polypeptides may be used to raise antibodies or to clicit immune levels of the potropin in biological fluids, as a marker for host tissues in which bathogenic organism invade or reside
                                                                                                                                                                                                                                                                                                                                                                                         Matches

Protein encoded by Prokaryotic essential gene #30468.

19-JUN-2003 (first entry)

1;

```
the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

((1) a vector comprising a promoter operably linked to the nucleic acid cenoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated concleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the cantisense expression is inhibited by the concleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular consolidation or the activity of agene in an operon required for proliferation or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of the gene product to that has an activity against a biological pathway crequired for proliferation, or that inhibits proliferation or the biological pathway in which acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the conditions or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational conditions or screening for homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, creaming activity of sevening homologous nucleic acids of the target prokaryotic essential genes. Note: The sequence data for this gratent did did not format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-MAR-2001;

                                                                                                                                                                                                                                                                                                                            This invention relates to novel genes and the encoded proteins thereof that are derived from the sea squirt Ciona intestinalis. Specifically, it refers to those genes that are expressed in the tissues or organs of the sea squirt during its developmental phase. The present invention of the mechanism of development and hence for developing regeneration medicines and gene therapy techniques. Accordingly, they can be used in the research of various genetic diseases, as well as the analysis of cell proliferation, differentiation and reproduction. Furthermore, such compositions can be useful for environmental measurements and water surveys, particularly for sea water surveys, and also for the preparation of transformed sea squirt for improving edibility of sea squirt such as Halocynthia roreti. This polypeptide sequence is a sea squirt protein sequence that has tissue specific expression during development, given in
                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID NO 248; 1846pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mechanism of development of tissue or organ of sea squirt.

                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated protein complexes useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of disease
                                            protein complex;
                                                                       Disease treating protein complex-derived protein
                                                                                                      06-MAY-2004
                                                                                                                                                             ADK63408 standard; protein; 584 AA
                                                                                                                                                                                                                                                                                                                                                               Sequence 584 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; SEQ ID NO 1567; 17pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB; ACC61393.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2003-250078/25.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              hybridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was obtained from the EPO in electronic format).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cc transformed plant having an improved property. The plant is a crop plant cc such as maize or soybean. The method of producing a transformed plant cc such as maize or soybean. The method of producing a transformed plant cc recombinant DNA construct and growing the transforming a plant with the cc polynucleotide or polypeptide is useful for improving plant properties. Cc improved plant properties, e.g. improved cold, heat or drought tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, collerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of carbohydrate, nitrogen or condition, improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan cc production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not compare the pathon of the printed specification but was obtained in electronic compared them to the printed specification but was obtained in electronic compared to the printed specification but was obtained in electronic compared to the printed specification but was obtained in electronic compared to the condition of the printed specification but was obtained in electronic compared to the condition of the printed specification but was obtained in electronic compared to the condition of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises the amino acid sequence of proteins from the hyperthermophile Methanopyrus Kandleri, the invention also comprises the complete genome from Methanopyrus kandleri. The Methanopyrus kandleri proteins of the invention are useful for enhancing the stability and/or activity of other proteins. The Methanopyrus Kandleri genome is useful is variety of diagnostic and analytical methods. The present amino acid sequence represents a Methanopyrus kandleri protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or antylosing spondylitis. The PRO proteins are also useful for preparing a medicament for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to PRO proteins and their coding sequences. The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide antigen unresponsiveness, selective IgM deficiency, selective IgM subclasses, immunodeficiency with hyper IgM, transient hypogammaglobulinemia of infancy, Burkitt's lymphoma, intermediate lymphoma, follicular lymphoma, type II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New PRO polypeptide, useful for diagnosing and treating a B cell related disorder, e.g. Burkitt's lymphoma, rheumatoid arthritis, autoimmune mediated hemolytic anemia, myasthenia gravis or ankylosing spondylitis.
                                                  Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1132 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABIJ0511), expressed DNA sequences (ABLIG175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the ABB72072.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid

The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New breast specific nucleic acid molecules and polypeptides useful for diagnosing, preventing or treating breast cancer, for producing transgenic animals or cells, or for research purposes.
                                                                                                                                  The invention relates to a novel isolated breast specific nucleic acid (BSNA) molecule which comprises a nucleic acid sequence encoding any of the 107 breast specific protein (BSP) amino acid sequences fully define in the specification. The molecules of the invention demonstrate cytostatic activity and may be useful for diagnosing, preventing or treating breast cancer, possibly via vaccine production or gene therapy The current sequence is that of a human breast cancer-related protein of the current sequence is that of a human breast cancer-related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is that of a human breast cancer related protein of the current sequence is the current sequence is that of a human breast cancer related protein of the current sequence is the cu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-DEC-2002; 2002US-0431097P.

                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes primer sets for synthesising 5602 full-CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 complementary strand of a polynucleotide which comprises one of the 5602 complementary strand of a polynucleotide; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a polynucleotide which comprises a sequence complementary to a complementary strand of a polynucleotide which comprises a comprising a sequence complementary to a polynucleotide which comprises a s'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense threspy and in comprise to the secification. The primers are useful for synthesising polynucleotides, company the primers are useful for synthesising polynucleotides, company the primers are useful for synthesising polynucleotides, company the primers and so useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and any specialised methods. AAH03166 to AAH13628 and company to the full-length compan
                                                                                                                                                                                                                                                                                                          Query Match
